

# Tired of working for your computer?

Too often today, productivity and sanity are lost to many simple problems in computer systems which build up and collectively act as a bottleneck when people try to get real work done. Don't slave over the small things or the massive headaches. Let us fix you up so you can focus on earning your promotion, finishing your contract, working with your design team, or simply assessing your net worth! We can solve virtually any digital problem for you, from the most simple to the most complex, usually in one visit. Got a problem not listed here? Call and see what we can do! Don't work for your computer ...

## Let it work for you!

Call Jon @ 555.555.5555 or 555.555.5555

### Hardware

- < **Upgrades** – upgrade any part of your system to make it the powerhouse you need.
- < **Installations** – we handle installation and setup of a wide range of integrated circuitry including motherboards, memory, processors, cards, and disk drives.
- < **Networking** – want your own network? Having trouble getting onto one? From design to implementation and troubleshooting, we'll get you talking on the Internet over your medium of choice or set you up with a private Local Area Network for file and print sharing on 10 Mbit, 100 Mbit, or Gigabit Ethernet. Want to go wireless? We can get you on the air at speeds of up to 12,000 Kbit/sec (standard 56k modems allow 56.6 Kbit maximum throughput)!
- < **Shopping** – take our recommendations to make sure you get the right parts at the right price in today's fluctuating market.
- < **Building** – never had the computer you wanted? Dream it and we can help you make your custom-designed PC come to life, complete with the wildest vanity cases and accessories.
- < **Mobile** – want to carry your important data on the go? We can set you up with a Pocket PC or Palm-based mobile computer and interface it with your home or office PC so you're never without those important phone numbers or birthdays.
- < **Tweaking** – let us take a look at your system and see what extra boost we can get out of your existing technology!

### Software

- < **Operating Systems** – we handle installation and recovery of entire operating environments, getting you back on your feet with the latest and greatest.
- < **Preferences** – is your system too complicated for you? Want a customized look for the way you think and operate? We can help tailor your computer and set up your software applications so you can find things quickly and understand your system.

- < **Anti-Virus** – with over 2 million active viruses in existence, you won't need to worry after we set you up with FREE virus scanning software you'll never have to touch again. Without the need for user intervention, your computer will automatically scan files as you open them, EMail as they are received, incoming Internet downloads and web pages, and active memory for suspicious instructions even if they haven't been classified as a virus yet!
- < **Backup** – we all have important data. Make sure yours is protected with a customized redundant backup configuration. Fully automated, we can give you peace of mind as your data securely protects itself. We have some configurations which allow for physical removal of this backup data from the system and placement in a secure physical location such as a safety deposit box whenever necessary.
- < **Adware** – tired of pop up ads? Many users have no idea how many applications are installed on their own computers which actively watch what they do on the Internet and display ads based on their actions (and in some cases are much more invasive). Do you value your privacy? Let us eradicate these instances of "spyware" and "adware" in one fell-swoop and set your system to keep them off for good!
- < **Email** – consolidate all your POP3/SMTP/IMAP accounts into one interface through MS Outlook (Express) or your choice of third party softwares.
- < **WWW** – is your browser 404? We'll get you back up and running with your choice of applications including MS Internet Explorer, Netscape Communicator, Mozilla!, and Opera. We can also help you upgrade to the new Java2 standard platform!
- < **Tweaking** – don't stand for minimal performance. With years of experience on many operating environments, we have the skill to streamline your system, letting it blaze the trail ahead of you.
